Ableton Live MIDI routing guide for Temperance Pro

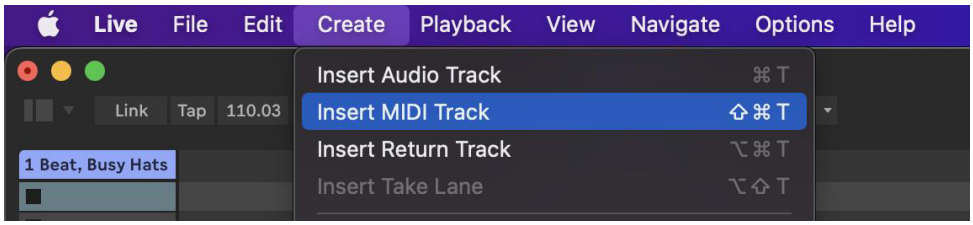

Overview

In Ableton Live, a MIDI track may send note information to a plugin on an audio track. The following steps show how to achieve this routing for using Temperance Pro with MIDI.

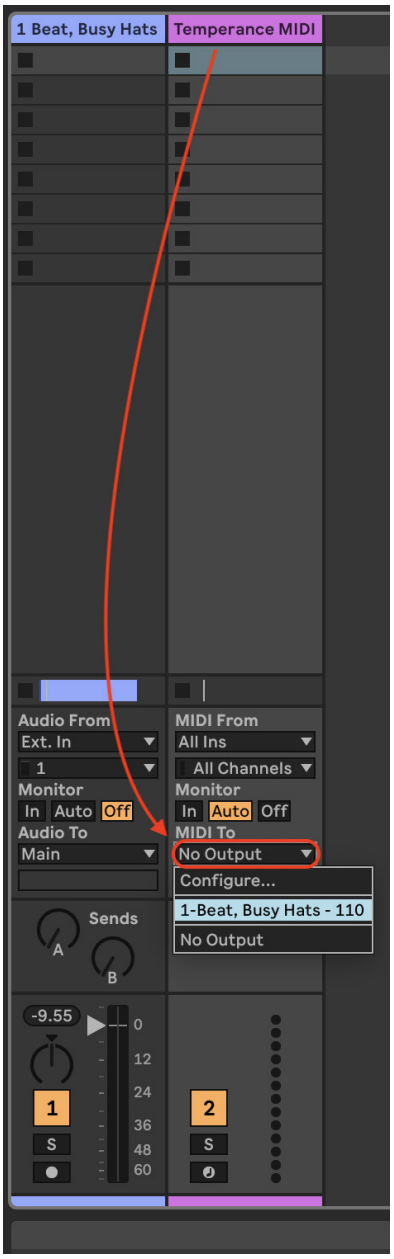

Step 1. Add Temperance Pro to the desired audio track or aux

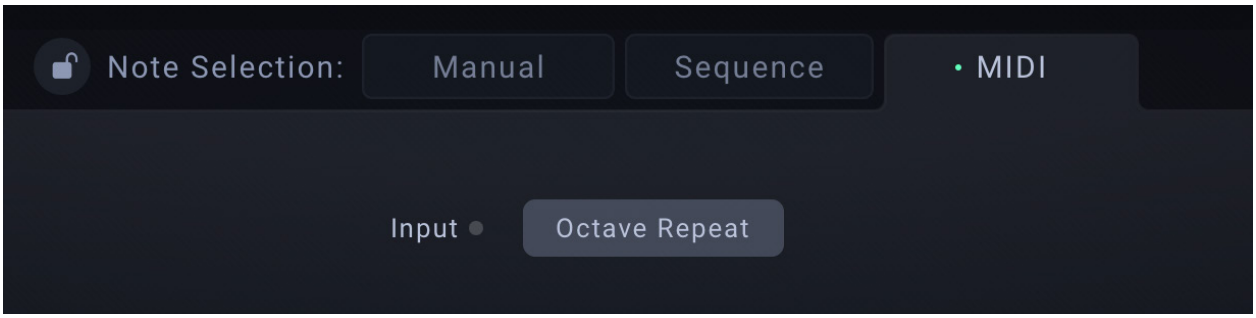

Step 2. Create a MIDI track from the Create menu

Step 3. Click the “MIDI To” path and select the track name where Temperance Pro is inserted

Step 4. In Temperance Pro, select MIDI mode and set positive Temper value to hear MIDI notes imparted in the reverb

Step 5. Perform or place MIDI on the newly created MIDI track to emphasize or de-emphasize notes in the reverb
