Cubase 12 MIDI routing guide for Temperance Pro

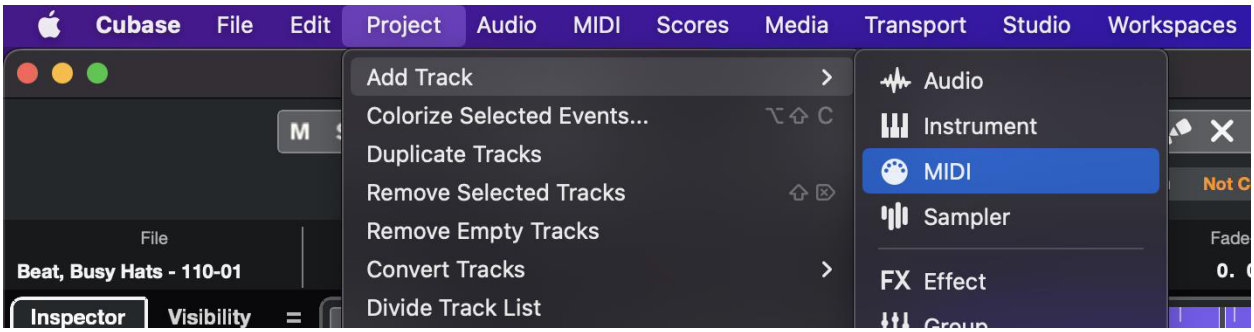

Overview

In Cubase 12, a MIDI track may send note information to a plugin on an audio track. The following steps show how to achieve this routing for using Temperance Pro with MIDI.

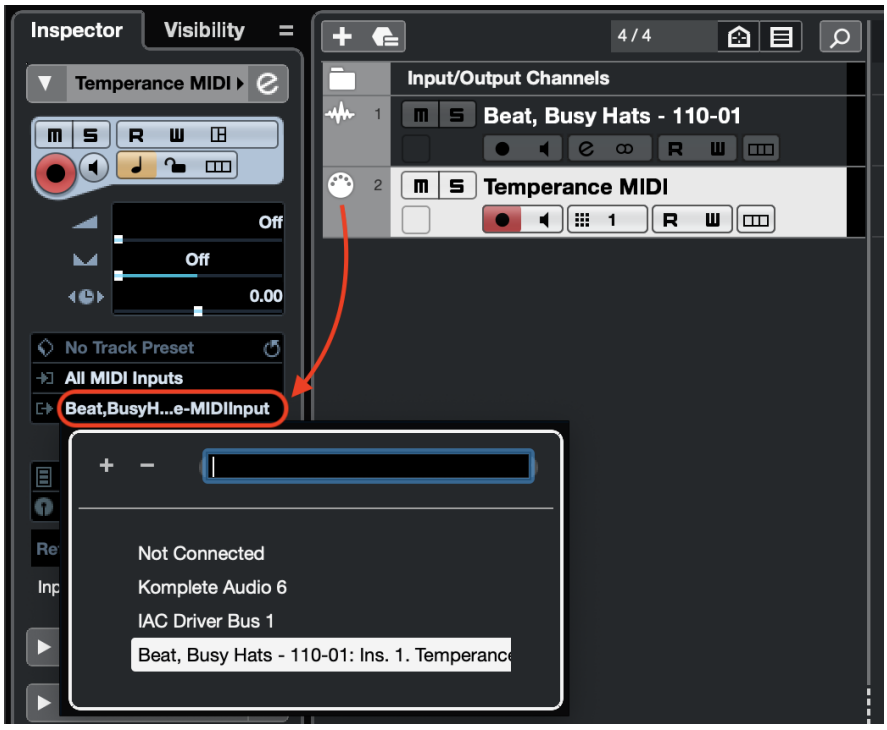

Step 1. Add Temperance Pro to the desired audio track or aux

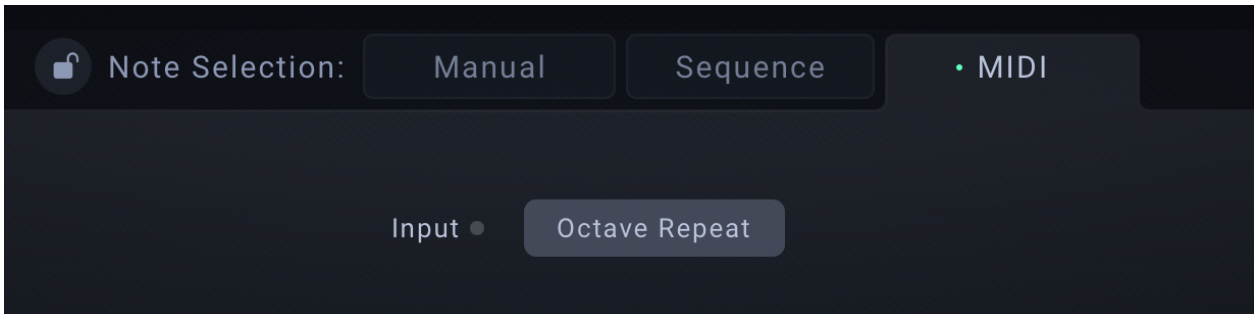

Step 2. Add a MIDI track from Project -> Add Track

Step 3. In the MIDI track output path, select the track name/ insert position for Temperance Pro

Step 4. In Temperance Pro, select MIDI mode and set a positive Temper value to hear MIDI notes imparted in the reverb

Step 5. Perform or place MIDI on the newly created MIDI track to emphasize or de-emphasize notes in the reverb
