Pro Tools MIDI routing guide for Temperance Pro

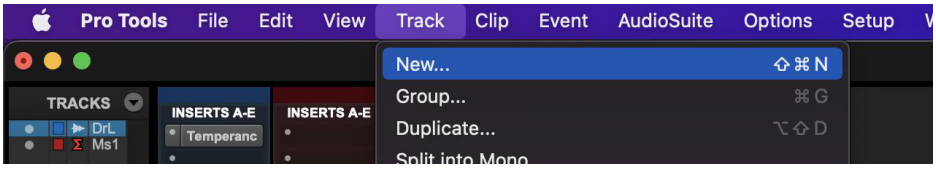

Overview

In Pro Tools, a MIDI track may send note information to a plugin on an audio track. The following steps show how to achieve this routing for using Temperance Pro with MIDI.

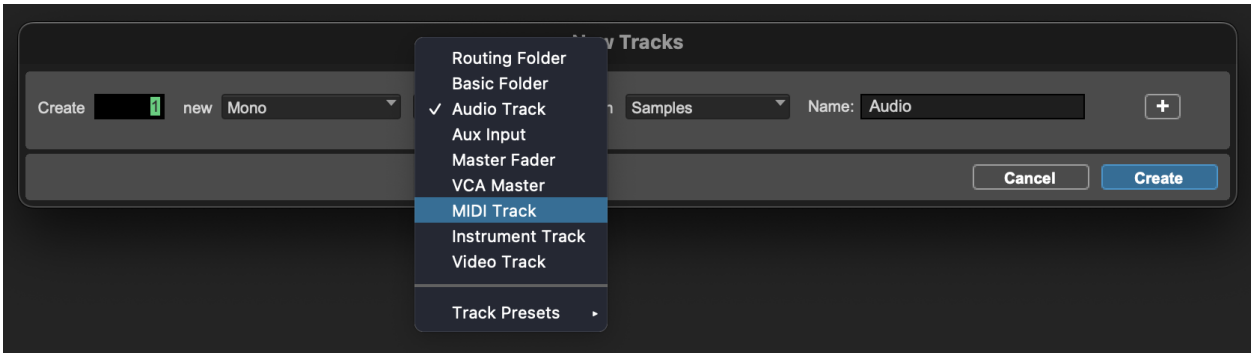

Step 1. Add Temperance Pro to the desired audio track or aux

Step 2. Click “New…” from the Track menu to configure a MIDI track

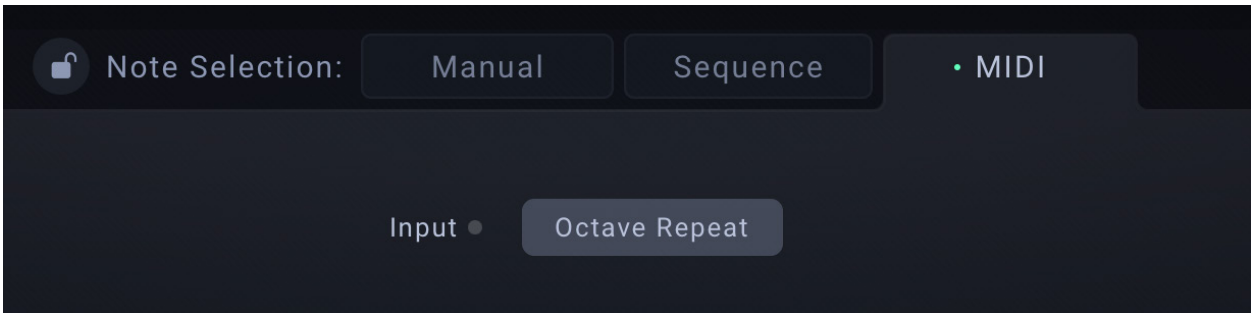

Step 3. On the ensuing window, click the 2nd dropdown and select “MIDI Track” before clicking “Create”

Step 4. On the MIDI output path, select channel-1 of the associated Temperance Pro insert

Step 5. In Temperance Pro, select MIDI mode and set a positive Temper value to hear MIDI notes imparted in the reverb

Step 6. Perform or place MIDI on the newly created MIDI track to emphasize or de-emphasize notes in the reverb.
